All GAF® and EverGuard® accessories shall be used where applicable.

GAF® Perimeter Edge Metal shall be used where conditions exist.

This system shall be installed by a GAF® Master or Master Select™ Contractor.

Each roof has unique requirements. This specification is a graphic representation of products and their installation.

To properly assess specific roofing needs, code compliance, system configurations and warranty eligibility, contact Contractor Services. Note: Your Field Services or Technical Services Managers are the only employees who can approve any deviation from GAF's published specification manual(s). Always review the appropriate Application & Specification Manual before commencing this project, as the Manual may contain information that is important for a successful installation.

This Cut Spec specification shall not waive, supersede or alter the requirements and recommendations found in the most current Application & Specification Manual(s) referenced above, printed technical bulletins or specific correspondence drafted for this project by Field Services or Technical Services Manager.
